Welcome to the research computing training and support pages - a place for sharing information on courses, events and other sources of support for research or high performance computing.

If you wish to advertise a course or publicise other news, or have spare places on a course which could be offered to research staff or students in other departments, or just know of a resource that might be useful to others, please enter a Blog Post or email details to Andrew Smith or Lorraine Moor.

Research Computing Training and Support

**Support**

**Research Computing Support Centre**

The Research Computing Support Centre offers support on advanced computing topics for research postgraduates and staff. This operates on an appointments system. For full details, please see:

- Research Computing Support Centre

**Training resources**

Where to look for training

- University of York training resources
- External training resources
- Online training resources

**Computing facilities**
Having your say!

Further information

- For advice on any aspect of high performance or research computing, please contact the Head of Technical Research Support, Andrew Smith.
- For general IT enquiries, please contact the IT Support Office.

Other links

- Research Computing Working Group
- Research - information for staff
- Research - information for students

What’s available?

- Research Computing Facilities
- Advanced Research Computing at York

Other types of support

- R User Group. Every third Friday of the month, researchers from across the University will present on applied statistics in R, based on their own research as well as introducing tools that helped them make better use of this software. For more details, contact Tom Patton: thomas.patton@york.ac.uk.

Research Computing at York

Qualitative data analysis tools survey:

IT Services conducted a survey during 2016 to discover the extent of use of qualitative data analysis tools across the University. We will use the data collected to improve our support for these tools by providing training, user support, and possibly more cost-effective licensing.

The report will be published here in due course.

Reports from previous surveys:

- Report on survey on the provision of training and support for research computing software (May 2014)
- Report on survey on research computing infrastructure (December 2014)

Are you looking for training but can't find a suitable course? Click on the button below to send us your suggestions and we'll consider the possibilities.

If you have any suggestions for information to add to these pages, please contact Lorraine Moor, Administration Co-ordinator, IT Services.
